

### Assignment-1:

Package edu;

public class University{

private String name;

private String location;

public University(String name, String location){

this.name = name;

this.location = location;

}

public String getName(){

return name;

}

public String getLocation(){

return location;

}

Scanned with

**CS** CamScanner™

```

    public void displayInfo() {
        System.out.println("University: " + name);
        System.out.println("Location: " + location);
    }
}

package mainpack;

import edu.university;

public class MainUniversity {

    public void main(String[] args) {
        University uni = new University(
            "MBSTU", "Tangail");
        uni.displayInfo();
    }
}

```
